electron multiplication digital 12bit CCD camera system

- electron multiplication gain of up to 1000
- superior resolution (1004x1002pixel) for EM-CCDs
- extremely low noise $< 1e^-$ @ gain > 50
- excellent quantum efficiency of up to 65%
- 12bit dynamic range @ gain = 2
- shutter / exposure times from $50\mu s$ to 1h
- thermoelectrical cooling down to $-15^{\circ}C$

sensicam em

The new generation of electron multiplication CCD sensors is integrated into a sensicam camera system. With this on-chip multiplication of the light signal the readout noise of the camera can be neglected ($< 1 e^- \text{ rms @ gain } > 50$). With its excellent resolution of 1004x1002pixel this high performance cooled digital 12 bit CCD camera system is best suited for extreme low light applications. The system features thermo-electrical cooling of the image sensor (down to $-15 \text{ }^\circ\text{C}$) and an outstanding quantum efficiency (up to 65%), which achieves a high spectral sensitivity in general and especially in the NIR. Exposure time modes (software selectable) range from $50 \mu\text{s} - 1\text{h}$. A high speed serial data link connects the system to the PC (fiber optic link available).

software:

Camware software for camera control, image acquisition and archiving of images in various file formats, WindowsNT, 2K and XP, 32bit-dynamic link library (DLL) is available for user customisation and integration on PC platforms (software development kit - SDK), software is operational in either single mode or with built-in recorder functions, drivers for popular third party software packages are available (see website)

options:

CCD image sensor in color version
custom-made versions

areas of application

laser induced fluorescence ■ luminescence microscopy ■ fluorescence spectroscopy (up to NIR) ■ bioluminescence ■ chemoluminescence ■ low light level imaging ■ imaging of bio markers (e.g. green fluorescent protein, GFP) ■ absorption & luminescence spectroscopy ■ imaging of potential sensitive dyes (Neuroscience) ■ night vision ■ security ■ astronomy ■ combustion process analysis ■ gel imaging ■ single photon counting ■ fuel injection
